

ABOUT EMERALD LASER:

Designed by a team of scientists and doctors, the Emerald Laser is the newest state-of-the-art technology for fat removal. The device can remove fat from any part of your body, providing outstanding results in convenient, pain-free sessions. Emerald is the only laser cleared by the FDA for fat reduction – a status attributed to the most effective and safest technologies.

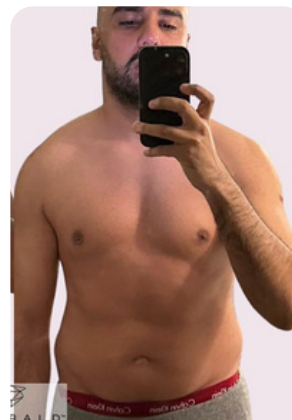

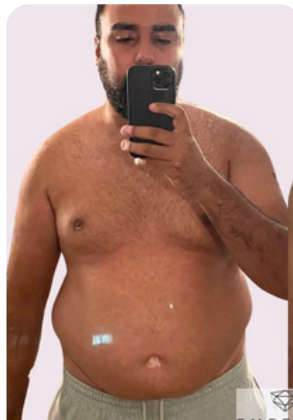

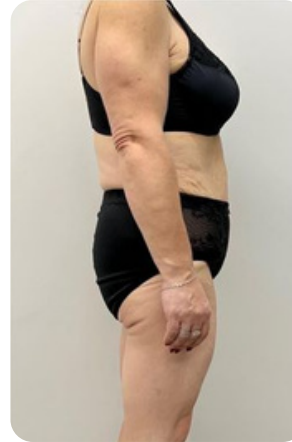

KEY FEATURES INCLUDE:

- The most effective and healthiest fat removal.
- Average circumference loss of 6 inches in 4 weeks.
- Painless, with no side effects or downtime.
- Convenient 30 minute sessions.
- 100% no-contact treatment.
- Medically certified & cleared by the FDA.

REMOVE FAT NON-SURGICALLY

AVERAGE LOSS OF
6 INCHES
IN FOUR WEEKS!

LASER**

**THE SAFEST &
MOST
EFFECTIVE WAY
TO LOSE FAT**

NO DOWNTIME - NO PAIN - NO BRUISING - NO FREEZING

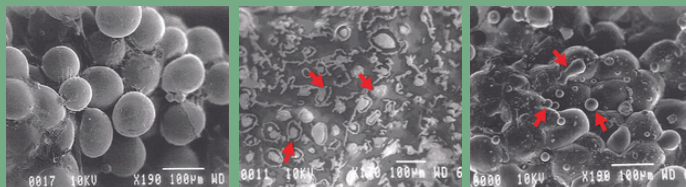

HOW DOES IT WORK?

Emerald uses 10 x 532nm true green laser beams (monochromatic, collimated, and coherent) to create small transitory pores for the fatty liquids in fat cells to seep out. The fatty liquids are then naturally flushed out through your lymphatic system.

The result is that the fat cells shrink instead of being killed. When this happens, the shrunken fat cells begin to act and function like healthy lean cells, releasing the correct messages to the brain and creating a communication effect throughout the fat organ, causing other fat cells to release their content and return their hormone responses to the positive.

Procedure's that have been popular in the past (such as fat freezing) focus on the elimination of fat cells, but recent research has shown this approach to be ineffective, and in the worst-case scenario, providing counterproductive results as the fat may regenerate in other parts of the body, or worse, around your organs.

The Emerald Laser effectively trains fat cells to behave and react differently and all without excessive heat or cooling.

Healthy adipose cells at 0 minutes

Fat droplets seeping across adipose cells at five minutes.

Complete collapse of adipose cell during emulsification at 18 minutes.

IS IT SAFE?

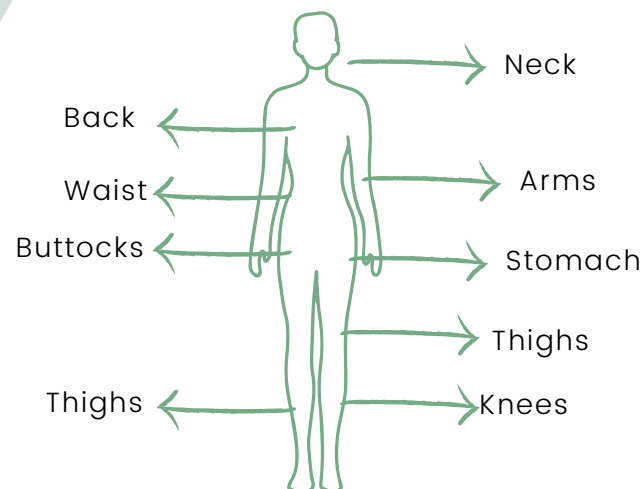

Very safe. Emerald has been rigorously tested and is US FDA-approved - One of the hardest certificates to obtain in the scientific industry.

However, although the technology is very safe, it may not be suitable for people with certain medical conditions. If you have had liver or kidney failure, heart disease, or if you wear a pacemaker, Emerald will not be suitable for you. It is also not possible to treat pregnant women with the technology.

We carry out a full medical assessment before starting your treatment, so if you are not suitable we will find out.

WHAT AREAS CAN BE TREATED?

The Emerald Laser can be used to treat multiple areas of the body. Please examine the image below for the possible treatment options.

LASER

AMAZING RESULTS

"Emerald is proven to be enormously effective technology and it doesn't use excessive heat or cooling preserving the endocrine function of the fat cell - which is truly unique. It can produce noticeable results in a short space of time and is the only technology to be given US FDA market clearance for overall body circumference reduction to patients up to 40 BMI."

Dr Munir Somji, DrMedispa, London

"I am thrilled to share my experience with the Emerald Laser Machine. The process is painless and remarkably quick. I'm amazed by the outstanding results I've achieved after undergoing the Emerald Laser Machine. 7 inches in total. Highly recommend it for anyone seeking effective and painless treatment."

Client at Exmouth Aesthetics

"The biggest surprise was the before & after photographs, I feel brilliant! I would encourage anyone thinking about trying this treatment to go for it. It has focused my mind particularly with all the told I had available to me, it's made a huge impact in a brilliant way. I just need a new wardrobe now!"
